

THE "ONCE IN" - "STAY IN" NLIS TAG!*

* 98.7% retention rate in extensive commercial trails.

"We put Rumitag NLIS tags in heifers back in 2006 and while other tags we have tried have been a failure, we haven't lost any of those ones- bloody amazing. I cover a lot of country buying cattle and have seen no evidence of tag losses with the Tough Tags- and that's what its all about." Peter Elmes Augathella, QLD.

4 FACTS WHY DATAMARS TAGS SUCCEED WHERE OTHERS FAIL...

1. SHAPE ...

Aerated application means that the tag wound heals quicker with fewer infections. Fewer infections means less irritation, which lessens rubbing which is one of the major causes of tag loss! Being triangular, our tags allow up to 80% more aeration than round tags!

2. LOCKING MECHANISM...

DATAMARS' surgical plastic "tri-swivel" locking mechanism results in a cleaner wound and less snagging.

3. PLASTIC TYPE...

DATAMARS' high quality flexible plastic tag with the transponder encased in fibreglass gives shock resistance and longer life.

4. ORIENTATION...

Angled transponder mounting improves the orientation and hence enhances the tag read range in the ear. Bold 6mm lasered numbering gives the best visibility.

ORDERING

Just call and place your order and leave the rest with us at Chemvet. Tags arrive in the post, ready to go, in just a few days!

APPLICATION

Alflex applicators can be used to attach tags and FREE applicators provided if required with orders over 100 tags!
