

VETMEC

Palatable Allwormer Tablets For Dogs

ACTIVE CONSTITUENTS: Each tablet contains: • 100 mg PRAZIQUANTEL • 450 mg OXIBENDAZOLE

FOR THE TREATMENT AND CONTROL OF:

Roundworm, Hookworm, Whipworm, Tapeworm (*Dipylidium caninum*) including the Hydatids Tapeworm (*Echinococcus granulosus*) in dogs.*

Convenient farmer sized pack (treats 10 average sized dogs).

Convenient dose size one tablet treats most farm dogs (1 tab / 20Kg).

Palatable – Liver flavoured.

Effective – Treats all intestinal worms* including the Hydatids Tapeworm.

Economical – Farmer pack price.

VETMEC PALATABLE ALLWORMER FOR LARGE DOGS IS:

To be used as a single dose treatment. Tablets are palatable and may be administered directly as a treat or crushed and put on food.

Fleas are intermediate hosts for tapeworm (*Dipylidium caninum*). Effective flea control will reduce the incidence of tapeworm.

DIRECTIONS FOR USE:

DOSAGE AND ADMINISTRATION: 1 tablet per 20Kg.

PUPPIES: Treat at 2, 4, 8 and 12 weeks of age.

ADULTS: Treat every 3 months.

BREEDING BITCH: Treat during gestation, one week before birth and 3 to 4 weeks after birth.

HYDATIDS CONTROL: Dogs in hydatid areas should be treated every 6 weeks.

WHIPWORM: Where whipworm is a problem, treat every 6-8 weeks after 3 months of age.

If worm problems persist, consult a veterinarian.

HYDATIDS:

Hydatids is a major human health hazard to farming families across country areas of mainland Australia. Humans coming in contact with tapeworm eggs from infected dogs can develop cysts in their internal organs with serious consequences to their on going health often requiring major surgery.

To prevent the risk of Hydatids in humans, dogs on farms in country areas in mainland Australia should be treated every 6 weeks (along with not allowing dogs to eat offal from any species).

* Not effective against heartworm.
